EDUCATION

B.Eng. in Information Technology, Pune Institute of Computer Technology (SPPU) 2022 – 2026
CGPA: **7.42/10** — Latest Semester SGPA: **9.25/10**

EXPERIENCE

Software Engineering Intern – ResumeInsight Research Project (PICT) Feb 2025 – Apr 2025

- Built scalable backend services and NLP-powered resume processing pipelines using Node.js, MongoDB, and REST APIs.
- Optimized MongoDB indexing and query execution, reducing resume-processing latency by **10%**.
- Designed reusable APIs, validation layers, and database schemas following clean architecture principles.
- Collaborated using Git workflows including feature branching, testing, debugging, code reviews, and deployment.

PROJECTS

WeatherGuard (Weather Intelligence Platform) – React, NestJS, TypeScript, MongoDB Jun 2026

- Architected a secure full-stack weather intelligence platform using React, NestJS, TypeScript, and MongoDB with a modular backend architecture.
- Implemented Google/GitHub OAuth, JWT authentication, RBAC, secure HttpOnly sessions, and role-based approval workflows.
- Built automated weather monitoring pipelines using scheduled background jobs and Telegram Bot APIs to deliver personalized weather alerts.
- Developed modular REST APIs, DTO validation, optimized MongoDB schemas, and deployed the application on Vercel with MongoDB Atlas.
- Structured the application using NestJS modules, dependency injection, DTO validation, and separation of concerns for maintainable, scalable development.

KeshviCrafts (E-Commerce Platform) – React, Node.js, Express.js, Supabase Mar 2026

- Built a production-ready full-stack e-commerce platform using React, Node.js, Express.js, and Supabase.
- Implemented secure authentication, payment gateway integration, shopping cart, wishlist, reviews, role-based admin dashboard, and order management.
- Designed RESTful APIs supporting product browsing, checkout, inventory, user management, and order workflows.
- Optimized performance using lazy loading, efficient state management, image optimization, and database query tuning.
- Applied secure backend practices including route protection, validation, error handling, and scalable API design.

Froodle (Realtime Collaborative Whiteboard) – Next.js, TypeScript, Socket.IO, MongoDB Feb 2026

- Built a low-latency collaborative whiteboard supporting concurrent multi-user synchronization using WebSockets.
- Designed an event-driven architecture with reconnect recovery, conflict resolution, and consistent shared state management.
- Implemented in-memory room state management with debounced persistence for improved responsiveness.
- Developed authentication, private rooms, undo/redo, zoom controls, and responsive mobile-first interfaces.
- Improved application reliability through debugging, performance profiling, and optimized WebSocket synchronization.

RESEARCH & PUBLICATION

ResumeInsight: AI-Driven Semantic Resume–Job Matching IEEE GITCON 2025

- Proposed an NLP-based semantic resume-job matching framework using spaCy, Levenshtein similarity, TF-IDF, and machine learning techniques.
- Achieved **89.3% F1-score** for skill extraction and **75% accuracy** for candidate-fit prediction.
- Published at IEEE GITCON 2025 and indexed on IEEE Xplore.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL

Frameworks: React, Next.js, Node.js, Express.js, NestJS, Flask, Tailwind CSS

Core CS: DSA, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering

Backend: REST APIs, JWT, OAuth, Socket.IO, WebSockets, API Design

Databases & Tools: MongoDB, Supabase, Git, Docker, Postman, Vercel, Render

Engineering: Clean Architecture, Modular Design, Performance Optimization, Testing, Debugging

AI: GitHub Copilot, Claude, Gemini, ChatGPT
