EDUCATION

B.Eng. in Information Technology, Pune Institute of Computer Technology (SPPU) 2022 – 2026
CGPA: **7.42/10** — Latest Semester SGPA: **9.25/10**

EXPERIENCE

Software Engineering Intern – Resume Insight (In-House, PICT) Feb 2025 – Apr 2025

- Developed backend services and resume-processing pipelines using Node.js, MongoDB, REST APIs, and NLP techniques.
- Designed and optimized database schemas, indexing strategies, and query execution paths, reducing processing latency by **10%**.
- Collaborated using Git-based workflows for feature development, debugging, testing, and deployment activities.
- Participated in requirement analysis and implementation of scalable software components for candidate evaluation workflows.

PROJECTS

KeshviCrafts (E-Commerce Platform) – React, Node.js, Express.js, Supabase Jan 2026

- Developed a full-stack e-commerce platform for a handmade crochet business using React, Node.js, Express.js, and Supabase.
- Implemented authentication, shopping cart, wishlist, product reviews, order management, and role-based admin functionality.
- Designed RESTful APIs supporting product browsing, filtering, user accounts, and checkout workflows.
- Optimized application performance through lazy loading, efficient state management, image optimization, and database query tuning.
- Applied secure development practices including route protection, input validation, error handling, and API security controls.

Froodle (Realtime Collaborative Whiteboard) – Next.js, TypeScript, Socket.IO, MongoDB Mar 2026

- Designed and implemented a **low-latency real-time collaborative system** handling concurrent multi-user state synchronization using WebSockets.
- Engineered an **event-driven architecture** with reconnect recovery, conflict handling, and state consistency mechanisms.
- Implemented in-memory room state management with debounced persistence to improve responsiveness and reduce database load.
- Developed secure authentication, private rooms, undo/redo functionality, zoom controls, and mobile-first user experiences.
- Applied debugging and performance profiling techniques to identify bottlenecks and improve application reliability.

Tribe Social – MERN, React, Socket.IO, MongoDB Oct 2025

- Architected a hybrid social platform combining REST-based services with real-time WebSocket communication.
- Built scalable backend services using **Node.js, Express, MongoDB**, implementing JWT authentication, authorization, pagination, and optimized CRUD APIs.
- Designed and developed RESTful APIs supporting feeds, messaging, notifications, and user management workflows.
- Developed room-based messaging systems and optimistic UI updates for responsive real-time interactions.
- Optimized database performance through indexing, query tuning, and efficient data-access patterns.
- Utilized Git for source control and collaborative software development practices.

RESEARCH & PUBLICATION

ResumeInsight: AI-Driven Semantic Resume-Job Matching [IEEE GITCON 2025](#)

- Proposed an NLP-based framework for semantic resume-job matching using spaCy, Levenshtein similarity, and machine learning techniques.
- Achieved **89.3% F1-score** for skill extraction and **75% accuracy** for candidate-fit prediction.

TECHNICAL SKILLS

Languages: C++, Python, SQL, JavaScript, TypeScript

Core: DSA, OOP, DBMS, OS, CN, Software Engineering

Frameworks: React, Next.js, Node.js, Express.js, Flask, Tailwind CSS

Tech & Tools: MongoDB, Supabase, REST APIs, JWT, Socket.IO, Git, Docker, Postman, Vercel, Render

Practices & AI: Agile, Testing, Debugging, API Design, DB Optimization, Copilot, Claude, Gemini, ChatGPT
